

What is Sober Peer?

Sober Peer is mobile health science platform that delivers continuous, real-time behavioral data from substance users via their smart phone. Artificial intelligence helps treatment providers measure, predict and prescribe evidence-based patient solutions that leads to deeper insights and lasting patient recoveries.

How does it work?

Technology has given us two tools that change everything - artificial intelligence and the smart phone. Individually they're powerful, but collectively they revolutionize how we collect data and how we turn what we collect into better insight.

Our smart phone App sends Sober Signals™ from the phone to a database that is supported by artificial intelligence programs. The Sober Peer program identifies these Signals as patterns of behavior and sorts them into meaningful observations. We collect the information in real time from the client 24 hours a day and may collect up to 500 signals. The number of signals improves as you and your client collaborate with a treatment strategy.

You'll be able to see a personalized dashboard for each client that summarizes all the Sober Signal that have been gathered and gives you insights into how best to improve recovery for your client.

How much does it cost?

Sober Peer offers a variety of service levels that have different administrative and transaction costs. Please see our pricing chart for details or contact us at support@soberpeer.com.

How do I get started?

It takes less than 24 hours to get enrolled and start using Sober Peer with your patients. Contact us at support@soberpeer.com to schedule your personal onboarding session.

Once you are enrolled, you'll access our cloud-based software through a browser on your preferred device (PC/Mac/tablet) and be able to send a link to any existing patients to invite them to start using the App.
